Validation: OK (125 lines) · example status PASS

Archive center encoded

Hannah’s Law applied to the Conditioning Tree across a Breath-Year.

Object	Role
Hannah’s Law	Root: tissues adapt to repeated load; unused capacity regresses
Conditioning Tree	Primary object: trainable heat–water–energy recovery organ
Breath-Year + FWOCR	Accounting unit and energy ledger
Progressive Overload	Mechanism applied to airway tissues
Functional Grail Surface	Major unresolved physiological sub-object
OSA / Airway Collapse	Flagship <i>exemplar</i> , not the center
Symbolic layer (DJED/GRAIL/WAS/ANKH)	Late-bound; subordinate unless earned

Executable controls

- Mandatory methodological order (ontology → adaptation → Conditioning Tree → accounting → claim ladder → HER → late-bound symbol)
- 12-level claim ladder (symbolic/rhetorical cannot impersonate established physiology)
- HER rewrite rules (actor before abstraction, tissue before diagnosis)
- Closed-Loop Map Interrogation
- Non-collapse rules (diagnosis ≠ mechanism, support ≠ tissue adaptation)

Skill stack now

Skill	Role
brudo-operating-status	Fail-closed panels + authorized initiative
brudo-lexical-technology	Closed 12-term operating vocabulary
brudo-lexitek	Coordinate-class pressure detection
brudo-respiratory-adaptation	Physiological + epistemic kernel of the PKG archive
critical-infrastructure-cyber-resilience	Parallel domain research

The skill is live and ready to enforce the archive's own center of gravity on any breathing / airway / adaptation query.
