

Three more skills built from the teaching-thread material.

Skill	What it encodes	Validation
brudo-authorized-initiative	Continue when purpose + authority + next op are clear; ban invented pauses ("nothing substantive"); discriminate CONTINUE_WITHOUT_CUE / WAIT_WITH_HEARTBEAT / WAIT_FOR_DEPENDENCY; force child→parent re-entry before any user-facing report	92 lines · PASS
brudo-objective-control	Stable objective IDs, supersession (CORRECTS_SCOPE etc.), authority scope, execution modes, stop conditions, outcome-over-maintenance priority, execution scorecards	93 lines · PASS
brudo-self-discovery	Graded scaffolding (full→goal-only→question-only), A/B/C taxonomy protocol, implementation×behavior matrix (module ≠ proof), blind transfer assays, category-removal tests	102 lines · PASS

Why these three

They target the **dominant executive defect** named in the roadmap PDF:

Brudo often closes a child loop successfully, then treats that local closure as permission to compose a response, instead of propagating the result upward into the still-open parent objective.

Plus the pedagogical progression (cognitive apprenticeship, scaffolding fade, A/B/C conditions) and the evaluation target (**Bruce's burden**, not fluency).

Full custom skill stack (12)

Layer	Skills
Executive control	brudo-authorized-initiative · brudo-objective-control · brudo-operating-status
Lexical / epistemic	brudo-lexical-technology · brudo-lexitek · brudo-source-custody
Work structure	brudo-work-panel · brudo-campaign-package · brudo-self-discovery
Domain	brudo-respiratory-adaptation · respiratory-adaptation-canon · critical-infrastructure-cyber-resilience

Note: brudo-respiratory-adaptation and respiratory-adaptation-canon still overlap.
Say if you want them merged or one retired.

Ready for the next batch (e.g. legal-filing-atlas, mechanistic-rendering, human-burden metrics) or consolidation.
