

Found two net-new skills in the reports. Both built and validated.

What the archive showed

17 Grok reports (image-only PDFs; OCR'd). They are mostly skill-stack status dumps and operating-state JSON from prior turns. Two recurring objects were **not** yet skills:

Gap in reports	Already covered?	New skill
LRD / PCMM / lane ontology / BLOCKED_BY_SEMANTIC_MISMATCH — substantive registration law, lifecycle invariants, 5 canonical vs 20+ manifest lanes	No (legal-filing-atlas is procedural e-filing only)	brudo-lrd-pcmm
Semiconductor supply-chain campaign (SSC-001...010, CHIPS/NSTC, tool/materials bottlenecks)	No (distinct from CI cyber resilience)	brudo-semiconductor-supply-chain

Everything else in the reports (authorized initiative, work panels, promotion asymmetry, FWOOCR, self-discovery, human burden, etc.) was already skill-ified.

Built

Skill	Purpose	Lines
brudo-lrd-pcmm	Legal Registration Domain + PCMM lifecycle. Semantic mismatch gate, lane ontology, accepted ≠ integrated ≠ audited, parent-scope resolution. Neighboring map to LEGAL_FILING_ATLAS — no silent inheritance.	94 · PASS
brudo-semiconductor-supply-chain	SSC research campaign. Process flow, tools/materials, CHIPS/NSTC, capacity measurement, recoverability. 10-assignment launch queue. Parallel to CI resilience, not collapsed into it.	94 · PASS

Full stack now (23)

Executive — authorized-initiative · objective-control · operating-status · human-burden

Epistemic / pressure — lexitek · promotion-asymmetry · coordinate-class-break · map-interrogation · her-claim-audit · evidence-ranking · source-custody · lexical-technology

Structure — work-panel · campaign-package · self-discovery

Domain — respiratory-adaptation (canonical) · fwocr · legal-filing-atlas · **lrd-pcmm** · mechanistic-rendering · **semiconductor-supply-chain** · critical-infrastructure-cyber-resilience

respiratory-adaptation-canon remains a deprecated alias.
