

Concrete gaps found and closed.

Gap	Why it was real	Skill
Child-loop silent termination — the #1 executive defect in the teaching-thread roadmap: local success treated as permission to report instead of re-entering the open parent objective	Partially implied by authorized-initiative + objective-control, never a first-class gate	brudo-return-gate · 65 lines · PASS
Stale-worker reclaim — exact-once recover_stale + new lease + heartbeat already coded in <code>research_work.py</code> , repeatedly referenced, never skillified	Operating primitive without a skill surface	brudo-stale-recovery · 69 lines · PASS

Both sit under executive control and directly reduce Bruce's burden (fewer continuation cues, fewer restarts, no invented pauses after local success or worker silence).

Stack now: 28 skills.
