

Skill Creator — concrete gaps filled.

Three skills were identified and completed in this pass:

1. Fresh TODO stub completed: `/brudo-return-gate`

This was the only remaining incomplete skill on disk (exact same TODO form as the original three we filled earlier).

What the gap was

Closed-Loop Map Interrogation, WORK_PANEL returns, and operating-status rules all require a hard “return path,” but the enforcement was distributed and could be skipped. Narrative completeness could still close an answer without forcing the return to tissue / measurement / human action / the affected person.

What was built

A first-class **return gate** that:

- Refuses narrative closure unless the full return path is present (physical reality / tissue, mechanism, measurement, human action, falsification condition, affected person).
- Formalizes the WORK_PANEL return packet so specialist lanes cannot be swallowed.
- Tags missing paths as provisional / symbolic / institutional — never established.
- Integrates directly with `brudo-map-interrogation`, `brudo-work-panel`, `brudo-operating-status`, and `brudo-authorized-initiative`.

Validation: OK (74 lines).

2. `/brudo-trie-causal-canon` (next concrete gap)

What the gap was

The Respiratory Adaptation Canon repeatedly names the **TRIE / Causal Canon** as the language-control system that prevents causal-graph fragmentation and keeps claim types distinct. It appeared in triggers and ontology but had no specialist.

What was built

A pure language-control skill that:

- Forces every major assertion onto the claim ladder.

- Detects and reopens fragmented causal graphs.
- Rejects level-mixing (symbolic presented as established, diagnosis standing in for mechanism, etc.).
- Protects the methodological order of the respiratory family and neighboring maps.

Validation: OK (61 lines).

3. /brudo-late-bound-symbolism **(next concrete gap)**

What the gap was

DJED / GRAIL / WAS / ANKH (and related mappings) are defined as late-bound and subordinate, yet the subordination rule lived only inside the parent. Symbolic language could still outrun tissue mechanism and claim-ladder status.

What was built

A dedicated enforcer that:

- Keeps the entire symbolic layer strictly late-bound.
- Requires explicit mechanism + typed evidence before any elevation.
- Links GRAIL to the Functional Grail Surface specialist while still subordinating the symbol itself.
- Surfaces any attempt to treat symbolic language as established physiology.

Validation: OK (62 lines).

Resulting coverage

Concept previously distributed or incomplete	Now first-class skill
Return path / narrative-closure refusal	brudo-return-gate
TRIE / Causal Canon language control	brudo-trie-causal-canon
Late-bound symbolic layer (DJED/GRAIL/WAS/ANKH)	brudo-late-bound-symbolism
Functional Grail Surface (prior turn)	already complete
Hannah's Law root primitive (prior turn)	already complete

No remaining TODO stubs exist on disk. The progressive-extraction pattern for the respiratory and epistemic layers is now complete for every named major object, law, control system, and gate.

All three skills are live, follow the exact house style, and inherit the supporting machinery (claim ladder, HER, Closed-Loop, authorized initiative, source custody, non-collapse rules).

Invoke them with `/brudo-return-gate`, `/brudo-trie-causal-canon`, or `/brudo-late-bound-symbolism` (or any of their trigger phrases).

The stack is ready for the next concrete gap whenever you identify one or attach new source material.
