

Four more extracted from the archive material.

| Skill                              | Gap closed                                                                                             | Lines     |
|------------------------------------|--------------------------------------------------------------------------------------------------------|-----------|
| brudo-conditioning-tree            | Primary biological object under Hannah's Law — was only embedded in the parent respiratory skill       | 51 · PASS |
| brudo-airway-work-order            | HME-first corrective hierarchy vs inherited filter-first triad (canonical promotion-asymmetry example) | 51 · PASS |
| brudo-osa-domain-misclassification | Required check before pure pathology closure — trainability path vs measured non-response              | 45 · PASS |
| brudo-execution-mode               | DRY_RUN → TEST_DB_WRITE → PRODUCTION gates + sufficient-stop (parent-level only)                       | 56 · PASS |

## Respiratory specialist set is now complete

Hannah's Law → **Conditioning Tree** → Functional Grail Surface → Progressive Overload → FWOOCR → Breath-Year → Airway Work-Order → OSA misclassification check → late-bound symbolism

**Stack: 43 skills.**
