

Extracted. Analyzed. Unified.

Three Brudo snapshots processed (1659 → 1745 → 2017). Newest (2017) is the live candidate and contains the full typed LRD domain package + authority freeze of the earlier archive.

```

Summary Recommendation

The system is correctly fail-closed. The single highest-leverage action is a **human decision packet** that resolves the lane ontology gap. Until that mapping is approved (custody → legal → red_team), no PCMM progress is possible and refill remains gated.

Everything else (jurisdiction seeding, dispatch, audit, drift) is correctly blocked behind it.

Ready for the next human decision or further extraction of any specific file.
