

Skill Creator — more skills delivered.

Two additional concrete specialists extracted from the remaining control modules of the `deep_research_workplan.v1` template:

1. /brudo-program-risk-register

Description

Maintain a living program risk register for Brudo deep research efforts. Track likelihood impact and mitigations for scope drift source sparsity data rights confusion of correlation with causation literature-only drift workload overload over-interpretation and staleness. Trigger on program risk register, research risks, risk mitigation, R-01 scope drift, or when reviewing risks before a gating decision or milestone.

What it adds

A living register for the eight baseline risks (R-01 through R-08) plus any domain-specific additions. Forces likelihood / impact / status / linked mitigations to stay visible across phases and gates so classic failure modes are not discovered only at publication time.

Validation: OK.

2. /brudo-seed-bibliography

Description

Build and maintain the seed bibliography and living source foundation for Brudo research programs. Start with primary official anchors original papers and systematic reviews then expand by citation chaining while tracking gaps and update cadence. Trigger on seed bibliography, bibliography strategy, citation chaining, source foundation, or when bootstrapping the literature base for a deep research program or campaign.

What it adds

The exact seed strategy (10–20 primary anchors → foundational papers → systematic reviews → forward/backward citation chains), minimum fields per source, screening rules, and living gap register for topics with weak or contradictory evidence.

Validation: OK.

Current state of the deep-research extraction

The major control objects from the original template are now first-class skills:

Control object	Skill
Full program structure & gates	brudo-deep-research-program
Contradiction / null-results	brudo-contradiction-register
Handoff & maintenance	brudo-research-handoff
Evidence grading & confidence tiers	brudo-evidence-grading-rubric
4-tier source priority	brudo-source-priority-framework
Methods matrix	brudo-research-methods-matrix / brudo-methods-matrix
Ethics / data-rights gate	brudo-research-ethics-gate
Program risk register	brudo-program-risk-register (new)
Seed bibliography strategy	brudo-seed-bibliography (new)

In parallel, the respiratory family has continued to densify with new specialists already present on disk (brudo-conditioning-tree , brudo-airway-work-order , brudo-osa-domain-misclassification , brudo-execution-mode).

Total skills $\approx$ 49. Zero TODOs remaining.

Invoke the new ones with /brudo-program-risk-register or /brudo-seed-bibliography (or any of their trigger phrases).

Further residual modules (visualization / Mermaid standards, roles-and-effort matrix) remain available if you want to keep going.
