What is better

Previous	This version
Verbose narrative blocks	Dense, machine-usable fields only
Soft recommendations	Explicit stop conditions + dependencies
Mixed LRD + filing atlas risk	Hard separation + prohibited inheritance
Initiative as slogan	Initiative as executable invariant
Aspirational next steps	Only observed or already-commissioned work
Long matrix description	One invariant + concrete gaps

The two human decisions remain the only true blockers. Everything else is already authorized and executable under the initiative rule.
